

Victor Medical Corp.

Irvine, California

Victor Medical Company has been providing quality service to the west coast veterinary community since 1966. With an extensive selection of pharmaceuticals, surgical instruments, and supplies, along with a firm commitment to setting a higher standard of service, Victor Medical Company has emerged as a leader in veterinary distribution.

Victor Medical is the epitome of a small workhorse. The facility is a bustle of activity and fills hundreds of orders every day from its 20,000 square foot DC. This Southern California company serves the western United States with pinpoint order accuracy, thanks to a number of AIMS features.

AIMS for Victor Medical is a full-featured WMS that includes lot control, serial tracking, and conforms to federal laws for veterinary supplies known as e-pedigree control. The system handles inventory in diverse storage requirements including dry, cold, bond, and hazmat. A key to Victor's efficiency is the integration of horizontal carousels with AIMS optimizing carousel turns, picking and put-away (replenishment) processes. Totes are assigned tote IDs and passed to the next carousel pod, case pick area, or the shipping area, as determined by the system based on the order requirements. All locations in the DC are bar-coded. AIMS interfaces to Motorola hand-held RF devices and Zebra bar-code printers.

Victor Medical achieves outstanding efficiency and accuracy rates. More than 80% of Victor's orders arrive after 3PM, and with AIMS WMS, they are able to fill and ship 100% of these orders on the same day. AIMS interfaces to an AS400 host system, and to a Clippership manifest system. AIMS runs on Windows Server, with SQL Server as the database manager.
